

Home Energy Audit

A home energy audit helps pinpoint where a house is losing energy and what you can do to save money. You could save up to 30% by making the efficiency upgrades identified in your audit!

Pellet Boilers

These systems are virtually seamless replacements for traditional oil-based systems. Minimal changes to the home heating system are required (depending on distribution system), and your oil boiler can remain in place if flue space allows .

Lancaster Community Energy Program

About The Program

The Lancaster Community Energy Program is a two year project focused on the improvement of home energy efficiency and the comfort of your house.

Homeowners pay a small fee depending on household income, to have a local auditor perform a home energy test and recommend the most cost-effective ways to weatherize your home.

50% of costs for upgrades up to \$4,000 will be covered by NHsaves. Additional financing is available to those who qualify.

About Pellet Boiler Incentives

Installation of a wood pellet heating system will help stabilize cost of heating . Pellets are a renewable and local resource that will reduce your carbon footprint while stimulating the local economy

You can save 40% up to \$10,000 towards a new pellet boiler system. Additional incentives will be offered to low income households.

Who is Eligible?

Any Lancaster homeowner may apply!

How to Apply

To apply through the Lancaster Community Energy Program just pick up an application at the town office. Or go on-line to the towns web page and download the application.

Feel free to contact your local energy advisor, listed on the back of the brochure.
