

# **LANCASTER** **COMMUNITY** **ENERGY PROGRAM**

**You could save up to 30% on your heating bill by making the efficiency upgrades identified in your audit!**

## **About the Project:**

The Lancaster Community Energy Program is a two year project focused on the improvement of home energy efficiency and home comfort.

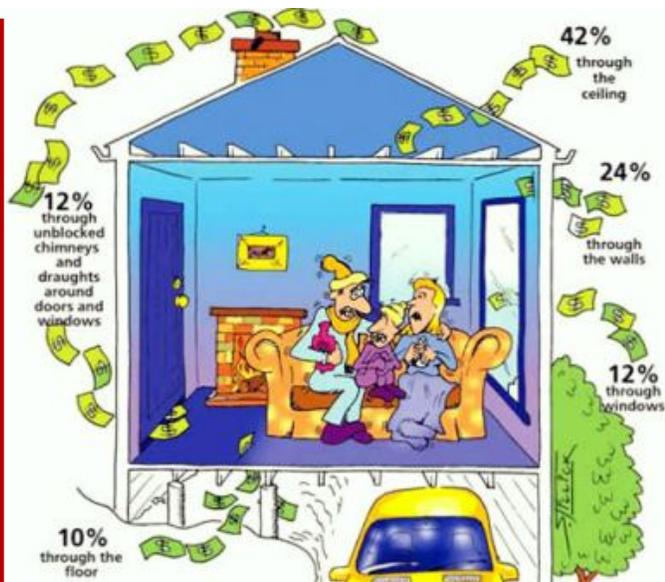

## **Home Energy Audit:**

A home energy audit helps pinpoint where a house is losing energy and what you can do to save money. A certified energy auditor will visit your house to conduct a blower door test and visual inspection. The test will determine how well the house is sealed and insulated. After the test they will write up cost effective recommendations for improvement.

## **Incentives Being Offered:**

Pay a small fee to have a local auditor perform an audit on your home and recommend the most cost-effective ways to weatherize.

1/2 of the cost for upgrades, up to \$4,000 will be covered through the program. Additional financing is available for those who qualify.
